Sustainable Water-Land Management in Agricultural and Hydrological Systems under Changing Environment

Message from the Guest Editors

Agricultural production is essential for human life, and it relies highly on water and land resources, crop growth, soil conditions, and the environment around us. However, agricultural systems are also vulnerable to changing environments, which can have a negative impact on food system sustainability and on the goal of achieving Zero Hunger, one of the Sustainable Development Goals proposed by the FAO. Furthermore, agricultural water management is one of the most important aspects in the water cycle, influencing hydrological processes such as runoff, groundwater storages, etc., while melting water erosion, flooding, and droughts are three major concerns that are easily propagated from hydrological to agricultural systems and threaten their stability by altering water resources quantity, distribution, and allocation. Understanding the changing environment and anthropological activities and developing corresponding measurements is thus critical for the sustainability of agricultural and hydrological systems.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
