

Special Issue

Sustainable Water Resources Management under Climate Change

Message from the Guest Editors

This Special Issue aims to discuss sustainable water resources planning and management under climate change. A wide range of relevant topics will be welcome, such as trend and frequency analysis of extreme events, sustainable planning and management to cope with climate changes, climate change modelling, uncertainty analysis, risk assessment, etc. In particular, it is preferred to employ the up-to-date CMIP6 (Coupled Model Intercomparison Project phase 6) experiments that have recently been released and are now available. The CMIP is an international collaborative effort to improve and share the knowledge about climate change, and a number of different global climate models participate in this project. Research articles and case studies that implement comparisons between the CMIP6 and CMIP5 projections could provide useful information on the interpretation of the CMIP6 projection results. However, articles that employ CMIP5 projections will be also welcome.

Guest Editors

Dr. Hyung-Il Eum

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
