Special Issue

Trends and Perspectives in the Approach to Sustainable Food Design and Production

Message from the Guest Editors

The modern world faces many environmental, climatic, geopolitical, and social challenges. The leading pillar of the economy is agri-food production. In the case of food design, production, and use, a sustainable approach is important, which guarantees the production of products without significant damage to the natural environment, with respect for natural resources, with the production of a small amount of waste/by-products. In this approach, it is extremely important to skillfully manage the byproducts of the agri-food industry for food production, especially food with health-promoting properties. The food design process should take into account the application possibilities of raw materials that are byproducts from another industry. This makes it possible to create a sustainable food production chain without generating significant costs and reduce the amount of problematic waste. This Si aims to collect articles and review papers reflecting advances in research on sustainable food design and production. We look forward to receiving your submissions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario Institute of Technology, Oshawa, ON L1G OC5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
