# Relationship between Tourism Growth and Economic Development

### Message from the Guest Editor

The economic literature recognizes tourism as an activity that enables economic growth; in addition to its impact on economic growth (through contribution to GDP, job creation, foreign exchange generation, etc.), most international organizations have begun to argue that tourism growth can influence the economic and cultural progress of society, improving the welfare of the local population. In this sense, economic growth can be achieved through different economic activities, provided that its expansion is important enough to have a significant impact on the overall growth of the economy. Thus, it has been proven that tourism is a major activity, becoming, in some countries, a cornerstone of business activity. This Special Issue invites research papers to discuss and analyze specific problems of tourism growth and economic development. For further reading, please visit the [Special Issue website](#).
