

## Special Issue

# On the Psychology of Sustainable Transport and Well-Being

### Message from the Guest Editor

As the issue of sustainable transport is one of the biggest challenges of our time, to pursue wellbeing for individual and society both in the present and in the future, it has taken a central role to many disciplines and research fields. As is already known, many psychological processes underlie transport behaviour and mobility choices: from perception to attention; from decision making to affective processes. Sustainability is a matter of psychology, since it brings into question motivation, concern, problem solving and the ability to take on different points of view and shorter and longer time perspectives. For such reasons, it is important that research explores and deepens the psychological determinants of sustainable transport.

This Special Issue is dedicated to papers focusing on the psychological aspects connected to sustainable transport and its relationship to individual and collective well-being. The scientific papers should cover both applied and fundamental research on the psychological processes underlying transport behaviour, transport choices and transport experience, with regard to any of the concepts related to sustainability.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
