

## Special Issue

# The Trends and Development of Mining and Energy under a Changing Climate

### Message from the Guest Editors

Global concerns about climate change have been growing over the last few decades. Greenhouse gas emissions with anthropogenic origins are recognised to be the major driver of these climate change effects. Industrial developments have resulted in increased accumulation of greenhouse gases with well-documented changes in climate conditions. With growing expectations for net-zero emission targets for governments and industry alike, there is pressure on various sectors to improve their carbon footprint reduction strategies. Carbon neutral energy transition will require an expansion in mineral production to sustain green technologies' infrastructure, with growing population and development of smart societies. Therefore, to meet net-zero emission targets, mining activities and energy transition developments must occur strategically to mitigate climate change impacts. In this special issue, we invite the submission of original research and review articles that address the challenge of mining and energy developments due to climate change implications. Given this special issue's multidisciplinary nature, contributions from a diverse range of research areas are welcome.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
