Special Issue

Urban Greenhouse and Sustainable Design

Message from the Guest Editor

This Special Issue aims to comprise high-level interdisciplinary research papers regarding the innovative sustainable design of urban greenhouses. There is widespread acceptance that urbanization occurs rapidly, and because of unbalanced development and aberrant and impoverished urban planning, our contemporary cities are facing major challenges. Recently, urban agriculture has been revealed to be an interesting strategy to face contemporary cities' food problem. Furthermore, urban agriculture seems to also be an efficient strategy to regenerate the economy of societies in crisis (financial and social, e.g., the city of Detroit). Thence, this Special Issue should focus upon the major challenge that is not explicitly investigated vet; how to create innovative sustainable designs to contain urban agricultural programs integrated into urban tissues in a way that promotes sustainability and positively affects-regulates urban microclimates.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
