

## Special Issue

# Sustainable Urban Public Transport Management and Planning with Big Data

### Message from the Guest Editor

Recently, information and communication technology (ICT) has been widely used in the field of public transport operation and planning. As a result, various big data such as passenger OD (origin/destination) data and bus operation data have been generated, and much interest in public transportation policies using them has increased. This Special Issue invites papers related to public transport management and planning utilizing various big data generated by public transport systems. We encourage new methodologies and various applications of data analysis for sustainable urban public transport management and planning.

### Guest Editor

Prof. Dr. Sangho Choo

Department of Urban Design & Planning, Hongik University, Seoul 04066, Republic of Korea

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
