

Special Issue

Weed Management in Sustainable Crop Production Management Systems

Message from the Guest Editors

The aim of the Special Issue is to improve the understanding of sustainable weed management strategies in crop production management systems. It is closely related to the scope of the journal by focusing on addressing challenges in agricultural sustainability, analyzing its environmental and economic impacts, and promoting socio-economic, scientific and integrated approaches to sustainable development. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following: (1) impacts of weed management strategies on soil health, water quality, biodiversity and other environmental indicators as well as crop yields and farms' economic returns; (2) socioeconomic and policy factors that influence adoption of sustainable weed management practices; (3) cost and benefits analysis of different weed control methods; and (4) challenges facing sustainable weed management such as herbicide resistance and issues caused by climate change. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
