

Special Issue

Air Pollution Prevention and Environmental Management

Message from the Guest Editors

As an environmental problem and human health risk, air pollution has emerged and traversed from the local scale to the global scale in its intensity and extent. This Special Issue aims to provide a comprehensive understanding of air pollution, its sources, impacts, control, prevention and mitigation policies and practices through the perspective of sustainable environmental management. We welcome submissions that focus on air pollution and contribute new knowledge which can help address problems related to air quality and environmental management. The researches can base on laboratory experiments and/or field observations, latest advances in emission inventories, transformation assessments as well as forecasting models and remote sensing applications and technology. Additionally, studies that focus on the environmental and health impacts of air pollution, risk and cost-benefit assessment studies of air pollution control. In particular, studies which analyze developing solutions for ambient or indoor air quality management are important. Furthermore, comprehensive review articles are also welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
