

Special Issue

Green Growth and Sustainable Development: Economic Pathways for a Low Carbon Future

Message from the Guest Editors

Achieving green growth and sustainable development is among the greatest challenges and opportunities of the 21st century. As the world transitions to a low-carbon future, policymakers, researchers, and industries seek pathways that align economic growth with environmental protection and social inclusion. Sustainable development today demands balancing prosperity with planetary boundaries through technological progress, responsible production, and effective governance. This Special Issue, *“Green Growth and Sustainable Development: Economic Pathways for a Low-Carbon Future,”* invites multidisciplinary research on the economic, policy, and institutional aspects of the global low-carbon transition. Topics include sustainable finance, green innovation, tokenising green finance and investment, renewable energy, carbon pricing, circular economy, sustainable production and consumption, resource efficiency, and governance for climate policy integration. We welcome original research, reviews, and policy analyses offering insights and recommendations for decoupling growth from emissions and achieving a just, sustainable global economy.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
