Sustainable Solutions for Energy-Efficient and Eco-Friendly Transportation

Message from the Guest Editors

In the near future, Europe aims to become a climate-neutral continent, which means the transport sector must also develop its carbon neutrality strategy. Sustainability principles in the transport sector include reducing environmental impact, promoting efficient resource use, and ensuring social responsibility and socio-economic efficiency.

To ensure that sustainability principles are enacted, the integration of transport systems and multimodality is essential. Furthermore, an efficient public transport system can reduce the use of private cars, leading to decreased traffic congestion and air pollution. Proper infrastructure not only ensures the seamless use of electric vehicles but also encourages people to choose sustainable travel options. The implementation of innovations such as intelligent transport systems enables more efficient traffic management and reduces fuel consumption. Smart technologies that provide real-time information on traffic conditions and potential issues improve both traveler safety and convenience.

- Transport sustainability
- Eco-friendly transport
- Alternative energy
- Socioeconomic efficiency

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
