

## Special Issue

# Sustainable Agricultural Economy

### Message from the Guest Editors

Agricultural economy generally pertains to the agricultural environment, resources, risk and uncertainty, food and consumer economics, prices and incomes, market structures, trade and development, technical change, and . Food and fibre productivity have soared due to new technologies, mechanization, increased chemical use, specialization, and government policies that favour maximizing production and reducing food prices. Furthermore, it is important to develop and emphasize the relationships between sustainable agriculture/the sustainability of agriculture and other modern research and practical directions, such as circular economy, rural economy, intelligent climate/climate-oriented agriculture, sustainable governance, proximity agriculture, social agriculture, cycling agricultural economy, knowledge economy, artificial intelligence, and digital economy. Resilience and adaptability might also be related to a sustainable agricultural economy. All these mentioned uni- or bi-directional relationships can initiate or develop the principles of a sustainable agricultural economy.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
