Holistic Assessment of One Water Harvesting in Agricultural and Urban Settings

Message from the Guest Editors

We welcome research and review papers that demonstrate a comprehensive assessment of one water harvesting in urban and agricultural settings, both in theory and in practice. A holistic, one water harvesting approach can help address water resource. The scope includes, but is not limited to the following aspects of one water harvesting:

- State-of-the practice reviews offering insights, approaches, best management practices (BMPs), tools and techniques for holistic, one water harvesting practices
- Designs (centralized versus decentralized one water harvesting systems in urban and agricultural settings)
- Integration of climate change uncertainties and biodiversity
- Water quantity versus quality assessment of one water harvesting systems
- Assessment of competing water demands for crops, hydropower, and aquaculture
- Life cycle assessment of one water harvesting systems
- Life cycle cost assessment of one water harvesting systems
- One water in practice: Case studies
- Sustainability assessment of one water harvesting systems by integrating ecological/environmental, economic, social, political, and technological pillars

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
