

Special Issue

Walkable Living Environments (Volume 2)

Message from the Guest Editors

Planning and design for walkable living environments represent important, useful and feasible challenges for cities and regions. This Special Issue regarding walkable cities and territories is directed to researchers and practitioners from different disciplines and domains interested in advancing knowledge and action around the incorporation of walkability concerns in urban planning and design practice. It aims to promote a cross-sectorial exchange on how urban environments can effectively be made more liveable, sustainable, healthy and equitable. Scholars are invited to discuss the multiple opportunities an approach oriented towards “active accessibility” can bring about to improve the urban quality of life in terms of the physical improvement of public space, the activation and strengthening of links, functionalities and social relationships between urban elements and people, the extension of people’s independence in “using” the city as well as in terms of benefits to individual and collective well-being.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
