

Special Issue

Wildlife Conservation: Managing Resources for a Sustainable World

Message from the Guest Editor

In this Special Issue, we aim to present a collection of state-of-the-art research on the conservation and management of wildlife species under the framework of sustainability. In doing so, wildlife conservationists and managers will be presented with a holistic view of the current problems and proposed solutions that could be useful as a guide for successfully designing and implementing conservation and management plans. Research might involve the study of:

- species, their habitats, and factors that might influence their temporal dynamics and spatial distribution from the local to the global scale (e.g., climate change, poaching, biological invasions, logging, forest fires, wetland loss, urbanization);
- human-wildlife relationships: attitudes and behaviors towards species and conservation and management practices, hunting, and conservation conflicts; or
- wildlife economics: the willingness to pay for species conservation and management, wildlife recreation and tourism, game and hunting, and wildlife farming.

We eagerly welcome your contributions related to wildlife conservation for sustainability.

Guest Editor

Prof. Dr. Vasilios Liordos

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
