

Special Issue

New Insights into Sustainable Agriculture Management: Woody, Horticultural, and Ornamental Crops

Message from the Guest Editors

This Special Issue of *Sustainability* seeks original research and review manuscripts on woody, horticultural, and ornamental crops to confront saline and water stress, with a focus on:

- Irrigation strategies to optimize water use efficiency
- Monitoring techniques by soil–plant-based sensors for sustainable irrigation management
- Use of non-conventional water resources for irrigation: wastewater, saline, and desalinated water
- Innovate approaches for assessing both stresses (spectral and thermal information)
- Physiological and agronomical crop performance
- Use of biostimulants in agriculture (arbuscular mycorrhizal fungi and plant-growth-promoting bacteria, among others).

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
