

Special Issue

Sustainable Urban Mobility and Transportation Planning for Better Resilience

Message from the Guest Editors

The scientific background of this Special Issue is rooted in the growing recognition that urban mobility and transportation systems are critical components of sustainable urban development. These systems are not only essential for economic growth and social well-being but also play a pivotal role in the resilience of cities to various shocks and stresses, such as climate change, economic downturns, and public health crises. The importance of this research area is underscored by the United Nations' Sustainable Development Goals, particularly Goal 11, which calls for making cities and human settlements inclusive, safe, resilient, and sustainable. The aim of this Special Issue is to provide a platform for scholars, practitioners, and policymakers to share innovative research findings, theories, and practices that contribute to the understanding and development of sustainable and resilient urban mobility and transportation systems. This subject is closely aligned with the journal's scope, as it seeks to promote interdisciplinary research that can inform policy and practice, leading to more sustainable and resilient urban environments.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
