

Special Issue

Carbon Neutralization in Sustainable Port and Shipping

Message from the Guest Editors

In accordance with global efforts to achieve a carbon peak and carbon neutrality as soon as possible, the port and shipping industry is implementing new development concepts. Currently, the focus is on high-quality development, corporate social responsibility, integrating the concept of green and low-carbon development into the port and shipping industry, and jointly promoting the industry's comprehensive green and low-carbon development. The decarbonization of the port and shipping industry continues to progress, and the carbon peak and carbon neutralization are hot topics that have dominated headlines since the beginning of the year, influencing decision making and trend judgment. In the process of achieving a carbon peak and carbon neutrality, the maritime department should focus on source governance, firmly establish the concept of ecological civilization construction, encourage the port and shipping industry to take responsibility, deepen the construction of maritime supervision, and comprehensively improve the ability of maritime governance. Additionally, the port and shipping industry must focus on the adjustment of transportation structure.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
