

Special Issue

Sustainability and Resilience in Agricultural Systems

Message from the Guest Editors

Lately, modern agricultural systems are facing multiple and complicated economic, social, environmental, and institutional challenges. And accelerating the transition to sustainable and resilient agricultural systems requires multi-layered assessments of agricultural practices, risk management, profitability, farm demographics, and governance. It is necessary to identify new paths, future strategies, and even alternative systems able to achieving the requisite performances in sustainability and resilience. Long-term viable agricultural systems will also contribute to Sustainable Development Goal (SDG) 2 (zero hunger, food security, and improved nutrition), while ensuring sustainable and responsible consumption and production patterns (SDG 12). In this vein, the present Special Issue calls for articles, featuring diverse theoretical perspectives, innovative approaches, and new points of view in these areas, based on various research methodologies. It is a great opportunity for networking, communication, and new collaborations with scholars sharing the same thematic interests.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
