# Risk and Uncertainty in Engineering Systems from the Perspective of Human Reliability

### Message from the Guest Editors

Despite the emergence of technological innovations in engineering systems, the effectiveness of the human element maintains its importance because it is seen as an important cause of potential negative consequences. Therefore, evaluating human performance is necessary.

Potential risks cause catastrophic consequences in terms of economic, environmental, and human life in critical engineering industries. For this reason, it is of great importance to investigate the risk in engineering systems. In addition, there are many uncertainties in risk analysis processes, and uncertainties need to be included in the risk analysis process and undergo various improvements. In this direction, more consistent results are obtained. As a result, risk analyses should be carried out by using methods that take into account relations between modern technological systems and human elements.

This Special Issue focuses on developing risk analyses that consider uncertainties in terms of human reliability in engineering systems. We invite researchers to present their theoretical methods and numerical models.

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

#### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
