Renewable Energy and the Load Capacity Factor: A New Indicator for Environmental Sustainability

Message from the Guest Editors

This Special Issue of Sustainability will discuss the impact of renewable energy on environmental sustainability from a different perspective. One of the most effective ways to avoid the high carbon dioxide emissions caused by fossil fuels is to promote and expand the use of renewable energy sources such as solar, wind, hydropower, and biomass. However, since carbon emissions do not fully reflect environmental problems, an analysis that considers ecological footprint and biocapacity simultaneously can be considered a more accurate method to evaluate environmental sustainability. Is renewable energy production and consumption an important criterion for developing the load capacity factor? The Special Issue essentially invites research that answers this question, though the theme is not limited to this. This will provide a more comprehensive and accurate roadmap for assessing environmental sustainability. Studies that use recent panel data and time series analyses to examine other macroeconomic indicators that may have an impact on the load capacity factor are also invited to this Special Issue.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
