

Special Issue

Sustainable Food Supply Chains and Service Operations

Message from the Guest Editors

With evolving consumer demands, advancements in emerging technologies, and the influence of climate change, oil dependency, fair trade, and public health crises, many food supply chain enterprises are undergoing innovative reforms to address evolving needs and challenges. These include digital transformation, sustainability and environmental initiatives, supply chain traceability, multi-channel sales models, personalization, and customization, among others. Consequently, the management of food supply chain service operations faces new challenges and opportunities. This Special Issue aims to gather significant research on sustainable food supply chains and service operations management in the context of these new dynamics. Its goal is to ensure the high quality and safety of food while enhancing the efficiency and sustainability of the food industry. We look forward to unveiling strong practical and theoretical implications that service operations management in the food supply chain within the context of new technologies, organizations, societies, and environments.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen
