Cognitive Aspects of Sustainable Mobility

Message from the Guest Editor

Sustainable mobility is the key to our future. It can be achieved at many levels: by improving vehicle components, vehicles, the whole transport system and even the systems that border it. We can model and simulate vehicles' practicality and work on new solutions for micro-mobility. These offer new opportunities to choose the form of mobility that is one of the keys to truly sustainable mobility. Increasing efficiency at the transport system level is also a current challenge—not only on the roads, but also on the ground, on water, in the air and on fixed tracks. Minimizing the mobility needed for human activity is an issue that can be significantly influenced, even from an urbanistic and architectural point of view. With the help of informatics and cognitive sciences, more and more data are being collected during development and use, which helps research and supports human and engineered decision-making for green mobility. A combination of the two will create cognitive mobility, enabling improvements in the system-wide sustainability of transport. One of the best tools for this is life-cycle analysis, which can compare alternatives from well to wheel.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
