Sustainable Agriculture and Food Systems in Southeast Asia and China

Message from the Guest Editor

A sustainable agriculture and food system—a key in the UN's Sustainable Development Goals—is crucial for not only achieving food security and reducing hunger but also enhancing environmental sustainability. Developing sustainable agriculture and food systems requires both the critical assessment of the socioeconomic and environmental impacts of the prevailing practices of industrial, productivist agriculture and the creative imagination of more sustainable alternatives. We welcome papers that study various aspects of the food system, including agricultural production, food manufacturing and processing, food distribution and retail, food consumption, and food trade. As China has become a new “food import complex” in the region, if not globally, and is now the top destination of agricultural export for most Southeast Asian countries, we are particularly interested in studies that examine the impact of either exporting to the Chinese market or investment from China on the local agriculture and food systems in Southeast Asia.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
