

Special Issue

Advanced Sustainable Concrete Materials from Nano-, Micro- and Macro-Perspectives

Message from the Guest Editors

In view of the current climate conditions (e.g., global warming), there is an ever-increasing need for an industrial green revolution, including in construction. Fortunately, some sustainable alternatives to traditional concrete have been discovered. Sustainable concrete is a form of eco-friendly concrete that utilizes wastes and recycled or residual materials as raw materials. Compared to conventional concrete, it decreases natural resource consumption and carbon dioxide (CO₂) emissions without sacrificing its mechanical and durability properties. To date, various concepts and forms of sustainable concrete have been proposed that have the potential to replace conventional concrete in different fields of application. However, most types of sustainable concrete are still in the research and development stage and have not emerged beyond small-scale application. This Special Issue is dedicated to the research of advanced sustainable concrete materials from nano-, micro-, and macro-perspectives, and aims to promote the development and application of sustainable concrete materials.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
