

## Special Issue

# Application of Big Data and Artificial Intelligence in Sustainable Development

### Message from the Guest Editors

The development and application of new-generation information technology, such as big data and artificial intelligence, have provided strong support for sustainable development. In terms of enterprises, the development and application of the new generation of information technology not only promotes the development of enterprises, but also a change of their management modes. Enterprises can develop and utilize various information resources through digitalization and intelligence and use this as a means to promote research and development, production and management to a higher level. In this Special Issue, research areas may include (but are not limited to) the following:

- The application of new-generation information technology in sustainable development;
- The application of big data in sustainable development;
- The application of artificial intelligence in sustainable development;
- Green supply chain management;
- Any other areas related to this Special Issue.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
