# Advance in Food Waste and Environment Sustainability: Current Trends, Challenges and Management Strategies

## Message from the Guest Editors

Food waste constitutes a significant global problem. with approximately one-third of the food produced for human consumption being lost or wasted every year. This is a substantial economic issue and a major environmental concern. Food waste contributes to greenhouse gas emissions, depletes natural resources, and exacerbates food insecurity. Meanwhile, the world is seeking to improve sustainability in all aspects, including food production and consumption. Therefore, understanding the current trends, challenges, and management strategies in food waste and environmental sustainability is of paramount importance. The aim of this Special Issue is to explore the latest advancements in food waste and environmental sustainability, focusing specifically on the current trends, challenges, and management strategies. By providing a platform for researchers, policy-makers, and industry practitioners to share their findings, this Special Issue will stimulate debates within the field and contribute to the development of effective solutions for reducing food waste and promoting environmental sustainability.
