

## Special Issue

# Responsible and Accountable Supply Chain Management and Logistics for Sustainable Cities

### Message from the Guest Editors

The increased public awareness toward the balance between quality of life and environmental stewardship has driven the development of a city with sustainability elements. A sustainable city needs to have green ecosystems to create a better place to stay. The green ecosystems come from various critical success factors: design, planning, materials supply, infrastructure management, and transportation systems.

Unfortunately, managing a sustainable city has frequently neglected supply chain management and logistics support. Responsible and accountable supply chain management and logistics are necessary to support the development of sustainable cities. The upstream–downstream production and consumption should be managed effectively and benefit the industry and society. Sustainable cities are suggested to deploy the Industry 4.0 technology to support the transparency and traceability of supply chain and logistics activities to ensure the efficient, responsible, and accountable usage of resources. Our focus in this Special Issue is to establish the sustainable city framework from a supply chain and logistics perspective.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
