

Special Issue

Sustainability in Agri-Food Supply Chain

Message from the Guest Editor

Sustainability has always been difficult to define, it carries many different meanings for many different people—particularly in the agrifood industry. Additionally, new and disruptive technologies are being introduced into the food production process, and the ways in which these will impact what is defined as, and what is regarded as, “sustainability in the agrifood industry” remain to be explored.

This Special Issue aims to address the question of “what Sustainability means and how it is measured” in relation to different components of agrifood chains and networks across all agrifood industry sectors, and attract research articles answering questions such as “What does the word ‘sustainable’ mean in the agrifood industry and for different components of an agrifood industry chain?” and so on. Of particular interest are the questions “What is the social license to do business in the agrifood sector in relation to sustainability credentials?” and “Could disruptive technological developments currently in play in the agrifood industry change ideas around how sustainability is viewed?”

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
