Special Issue

Agricultural Genomics and Sustainable Productivity

Message from the Guest Editor

Technological innovations in Agronomy have driven a remarkable increase in crop productivity during the past several decades. However, the increasing awareness about the limitation of natural resources explains that one of the main goals of current agriculture is the sustainable enhancement of crop yields. Thus, "Producing more with less" has become a central notion of many research efforts in the field of plant production and related disciplines. Agricultural genomics, or "Agrigenomics", may face this challenge through various genomic and bioinformatic technologies. Genotyping and molecular marker development, comparative genomics, transcriptome analysis, and recombinant DNA technology offer the potential to gain advanced knowledge and to develop valuable tools that will aid in the selection and breeding of novel plant varieties with a more efficient absorption and use of water and nutrients. Current progress in agrigenomics will surely have a main role in the creation of this new generation of sustainable crops. This Special Issue aims to report novel research and reviews concerning the use of agricultural genomics to support sustainable crop production.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
