# Agroecology and Sustainable Organic Farming Systems

## Message from the Guest Editor

Recently, the term agroecology has mostly been used in scientific studies, and is considered to be one of the most important scientific disciplines—a series of cultural practices and/or a social movement aiming at developing cropping and farming systems based on the best use and conservation of natural resources and the minimum use of external inputs. Sustainable organic farming systems are also a topic of great research interest.

We welcome the results of original studies from different parts of the world including a large number of crop plants based on agroecology and sustainable organic farming systems. The submission of review papers by leading experts in these fields is also strongly encouraged.

## **About the Journal**

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
