Special Issue

Air Quality: Sustainability of Human Society

Message from the Guest Editors

Air quality is intrinsically related to the sustainability of human societies. This connection is not only related to human health, but to other aspects including socioeconomic sustainability and natural ecosystem livelihood. Air-pollution-imposed climate change and extreme weather hazards in particular pose great risks to human livelihoods.

While there is a large number of studies concerning monitoring, prediction, and improvement of air quality, there is comparatively little literature discussing the relationship between air quality and health, climate, ecosystem, agriculture, and economics leading to the sustainability of human societies.

The focus of this Special Issue is on addressing this apparent gap in knowledge. The aim is to collect works addressing the relationship between air quality with the various long-term sustainability issues of human societies. We would like to invite all aspects of research, especially multidisciplinary works, that tackle the issue in a holistic manner that can enrich our knowledge on the aforementioned issues.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
