

Special Issue

Aquaculture Management and Business Competitiveness: Towards a Sustainable Development of Aquaculture Production, Value Chains and Markets

Message from the Guest Editor

Aquaculture is one of the fastest growing food production sectors, and is called upon to meet the growing global demand for seafood products that fisheries cannot satisfy.

The scope covered in this issue is not limited to aquaculture economics, competitiveness and management in production, but also includes other topics along the value chain such as fish processing, seafood trade, price integration, supply chain analyses, risk assessment or consumer behaviour, among others. Interdisciplinary works covering environmental and social interactions of aquaculture activities are also in the scope of this special issue.

This special issue aims to be useful to aquaculture producers and companies to improve the competitiveness and sustainability of their activity and thus improve their well-being. It also aims to provide a snapshot of the current state of knowledge and the latest advances and practices in this area to policy makers and other stakeholders to promote the governance and sustainability of aquaculture.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
