Artificial Intelligence Pathway for Environmental Sustainability: Monitoring, Modeling, and Decision Making

Message from the Guest Editors

Geo-environmental modeling, an approach for simultaneously managing and learning about natural processes on the landscape scale, has been widely applied for efficient environmental management for several decades. AI technology, such as algorithms, data-mining, and statistical models, can provide vital information about the relationships between natural resources, natural disasters (flood, ground subsidence, landslide, debris flow, wildfire, etc.), geo-environmental factors, and human activities, and thus can support adaptive decision making. AI technology allows for the inclusion of knowledge processing (decision support systems) for sustainable natural resource management. This Special Issue will benefit natural, environmental, social, and sustainability scientists, engineers, managers, and other stakeholders with an interest in the GIS-based machine learning modeling of natural disasters and environmental planning. This open access Special Issue welcomes high-quality and innovative scientific papers describing cutting-edge research related to the application of artificial intelligence approaches, GIS, and remote sensing techniques in the study of sustainability-related issues.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
