

Special Issue

Assessing Crop Yield and Risk for Sustainability

Message from the Guest Editors

Climate change, critical biodiversity losses, and water scarcity are among the largest challenges that humanity has been facing in recent years. Agricultural production, as the primary activity in provisioning human food, is both impacted by and contributes to these problems. This Special Issue aims at exploring the role of crop modelling for risk and impact assessments of cropping systems. Expected contributions deal with advances in methods for risk, impact, and tradeoff analysis, including scenario design and model output analyses; advances in data aggregation and model upscaling methods; yield forecasting systems; and integrated assessment modelling. Contributions that address knowledge transfer from crop modeling to policy makers and other stakeholders are particularly welcome.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
