Frontiers in Bio-Energy Production and Applications

Message from the Guest Editors

The high demand for energy as well as the greenhouse gas emission due to the combustion of fossil fuels promotes the development of bioenergy. Bioenergy is a type of sustainable energy resource that is derived from renewable biomass.

Bio-oil is a liquid form of bioenergy produced from the thermochemical conversion of biomass, and it shows great potential as an alternative to petroleum oils. Since 2012, a few industrial-scale demonstration plants have been under operation to produce bio-oil from woody biomass via fast pyrolysis. The produced crude bio-oils are mostly used as fuel oils to produce heat rather than being directly applied as transportation fuels because of the significant amount of heteroatoms. Without any doubt, it is of utmost significance to remove heteroatoms, especially O and N content, from pyrolysis bio-oil prior to its use as drop-in fuels. Aside from liquid bio-oil, bio-hydrogen has been regarded as a clean and inexhaustible energy carrier. To date, bio-hydrogen can be produced via thermochemical, biological, and electrochemical conversion routes.

This Special Issue will focus on the above topics and will accept original work.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
