Special Issue

Biodiversity and Natural Resources Management

Message from the Guest Editor

Biodiversity is a base to support all forms of life on earth, ensuring environmental sustainability in terms of providing clean and sustainable natural resources (land, air, water, soil, plants, and animals), and essential ecosystem services. Soils are widely recognized as a major storehouse of global biodiversity, and up to 90% of living organisms in terrestrial ecosystems are associated with below-ground habitats. Soil biodiversity constitutes an important source of genetic resources for biotechnological and medical innovation. Climate regulation is one of the most important ecosystem services on a global scale. The loss of soil biodiversity is deemed as one of the major soil threats in many regions of the world. For example, land clearing and concomitant degradation are the contributing factors along with the introduction of field monocultures that have further aggravated the impoverishment of biological diversity. Such activities contribute to further loss of biodiversity through an accelerated deterioration of land and water resources. This loss in biodiversity is intimately linked to the climate emergency and has been increasingly recognized by the scientific community.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
