Special Issue

Building Organizational Resilience for New Normal and Sustainability Performance

Message from the Guest Editors

Although a significant amount of research has been conducted to understand how firms and their supply chains can develop resilience and manage sustainability during this pandemic time, the majority of studies are conceptual in nature, with limited empirical evidence. This Special Issue is aiming to address this gap in literature. There are several research questions that remain unanswered in the context of pandemic, for example: i) how to measure organizational resilience from a pandemic (i.e. COVID-19) perspective; ii) what resources and capabilities are critically important for firms to build organizational resilience and manage sustainability; iii) what strategies are salient for managing procurement, processing, and distribution processes to enhance organizational/supply chain resilience and sustainability. This Special Issue is not limited to above mentioned research questions. Any manuscript that demonstrates a novel theoretical contribution to organizational/supply chain resilience and sustainability literature in the context of pandemic are always welcomed. We are also open to receive any conceptual manuscript that demonstrate a novel theoretical angle.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
