

Special Issue

E-business, Information Systems Management and Sustainable Strategy Development in the Digital Era

Message from the Guest Editors

The term “digital transformation” is regularly used to indicate the impact of a range of technologies on business models and societal activities and functions. These technologies include social media, cloud computing, artificial intelligence, mobile computing, Internet of Things, Big Data, analytics, blockchain, robotics and augmented reality. This Special Issue focuses on how these technologies are impacting electronic business (e-business, including e-governance), the management of IT in organisations and in society at large, the development of sustainability strategies, and the possible linkages between these concepts. It aims to explore how e-business is operating in the digital technology era, how the IT management function is changing to accommodate these new technologies in both developed and developing world environments, and how sustainability strategy is changing in this evolving technology and business environment.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits
