# Carbon Accounting and Management: Challenges of the Decarbonization Scenario and the Pandemic

#### Message from the Guest Editors

Corporate carbon accounting is a key topic for contemporary academics, practitioners, and policy makers. Furthermore, the latest developments following the outbreak of COVID-19 have increased the focus on decarbonization and the demand to quantify this process. Decarbonization may be a mainstream trend in the coming years; however, carbon strategies will definitely shape the socio-economic horizon in the foreseeable future. Global efforts are concentrated on restabilizing the world economy after the impacts of the pandemic. However, in this post-pandemic restructuring, the return to "normal" must be by a decarbonized route. The crisis has also provided an opportunity to change the way in which the economy operates.

This Special Issue examines the impact of the current decarbonization scenario on the carbon footprint and carbon management of individuals, organizations, and industries. We also welcome studies that address the carbon management practices of organizations or industries related to policies. Carbon management studies on key consumption areas are also welcome.

## **About the Journal**

#### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
