Special Issue

Circular Economy and Clean Technology for a Sustainable Future

Message from the Guest Editors

The processes that will make the current economic model possible will only be optimal and cost-effective if the latest technological advances are used. For both challenges, technology is the main tool that must be used, as it is only through the most innovative advances that we will be able to reach the most people. Technology will lower the costs of procedures essential to the circular economy model, such as recycling. The circular economy has started to be promoted as a more appropriate economic model to reduce pollutant emissions, reduce wasting resources and, as such, to curb climate change. New technologies will make the paradigm shift possible, as they provide the tools that are able to lower costs, automate tasks, and even create economic value. In a circular economy, waste and pollution are minimized, material cycles are closed, and consumption is decoupled from economic growth. This Special Issue is focused on exploring green technologies for the circular economy revolution. Papers of interest will address sustainable green technologies from a broad range of disciplines all aimed at contributing to the circular economy goal.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
