Circular Supply Chain Management in Post-COVID-19

Message from the Guest Editor

Although previous studies have been striving for exploring the frameworks of sustainable supply chain management for guiding the practices and offering the basis for strengthening the understanding of theory, it still encounters difficulty in addressing the sustainable issues for reaching the circular economy. Ellen MacArthur Foundation (2014) proposed a circular supply chain management in dealing with the waste flow by taking recycling, reusing, and reducing into account for reaching zero waste. Furthermore, the food delivery is very convenient for the quarantine during the COVID-19 situation. However, it generated huge amounts of wastes from plastics or papers from the container of the food. These wastes can be recycled not even reach 50%, and the rest of the unrecycled waste will be disposed by the traditional ways that may pollute the groundwater, air, and land. Therefore, it has an urgent need to explore the valid frameworks/models in guiding the firms, decision-makers, governments, and so on to deal with these issues. Because the sustainable issues are not getting slow while humans suffer the pandemic issue.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
