Impacts of Climate Change on Biodiversity

Message from the Guest Editors

Climate change is one of the most important environmental challenges of our times. A healthy planet is essential to support life. That includes a rich ensemble of species, from the smallest of bacteria to the largest of forests. A highly biodiverse ecosystem is resilient to shocks, provides for itself and others through various ecosystem services. Biodiversity changes have a cascading effect of ecosystem services and human livelihood. There are many manifestations of the impacts of climate change, triggered by shifts in temperature, rainfall, and other direct or indirect manifestations of climate change. Both flora and fauna are impacted. In terrestrial ecosystems, changes may occur in the microbial abundance, productivity, faunal or faunal composition or distribution, habitat, and agricultural productivity. In aquatic ecosystems, changes may include primary productivity, species abundance and distribution, migration, coral bleaching, temperature shifts, and the propagation of impacts throughout the food-web. We invite high quality experimental or modeling articles on the above or other impacts of climate change on biodiversity.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
