Special Issue

Impacts of Climate Change on Economy and Environmental Policies for Sustainable Development

Message from the Guest Editors

Faced with the serious threat of climate change to humanity, reducing greenhouse gas emissions (GHG) has become the consensus of the international community. The impacts of climate change are likely to cause cascading and potentially far-reaching repercussions on the social, economic, and environmental systems, with important implications for sustainable development. In particular, climate change will cause damage to agriculture, forestry, husbandry, transportation, energy and tourism by thoroughly affecting natural resources, factor productivity and household consumption. Climate change is also strongly interconnected with a multitude of environmental and social risks, such as air pollution, deforestation, inequality, poverty, starvation and malnutrition, which exacerbate the threats of climate change to humanity, unless further actions are taken. This Special Issue aims to contribute an outstanding collection of both research and practice-oriented papers on climate change impacts on economy and relevant environmental policies for sustainable development.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
