

Topical Collection

Climate Change, Landscape in Transition and Tools for Sustainable Landscape Planning

Message from the Collection Editor

In recent years, there has been a growing interest in "landscape approaches" to overcome insufficient sectorial approaches to addressing interconnected social, environmental, and political challenges, such as climate change. Interactions between people and their environment provide a motive for the very use of the term "landscape". Seen in this way, a landscape approach is an individual-oriented approach to sustainable land use management and planning. This Special Issue encourages researchers and practitioners to submit original research articles, case studies, reviews, and viewpoint articles on topics including, but not limited to, the following:

- Landscape level assessments of the probability of negative ("risk assessments") and positive outcome in a changing climate;
- Climate change perceptions;
- Measures for climate change adaptation and mitigation in a landscape;
- Climate change adaptation/mitigation decision-making by individuals;
- Adequacy of communications; and
- Tools for sustainable landscape planning.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
