

## Special Issue

# Climate Change and Natural Resources Economics

### Message from the Guest Editor

The confluence of the problems of sustainable management and adaptation to climate change represents a rich opportunity for research that is making its way into academic literature. Natural resource economics and modelling have been a traditional background discipline contributing to the understanding of mechanisms behind actual management performance. The aim of this Special Issue is to share good practices among practitioners of natural resources management facing climate change issues, together with providing emerging modelling approaches to improve the understanding the mechanisms driving climate change impacts on natural resources, representing a fruitful opportunity to push forward our knowledge in the combined fields of sustainability and climate change. Your contributions are welcome.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
