# Climate-Change-Related Impacts on Marine Benthic Primary Producers

### Message from the Guest Editors

Climate change and related threats are directly affecting marine benthic ecosystems worldwide, altering the abundance, distribution, and productivity of their communities. In this context, understanding how accelerating environmental change will affect biodiversity and ecosystem functioning is crucial for implementing effective management actions for natural systems. For this, experimentally generated datasets, based on empirical data about the responses of different species and species assemblages of benthic primary producers, are very useful for predicting the impacts of environmental change and for implementing adequate conservation actions. This Special Issue welcomes contributions related to all aspects of global change effects on benthic primary producers (e.g., seagrasses, macroalgae, corals), including aspects related to their biology, geology, ecology, physiology, molecular biology, microbiology, chemical ecology, taxonomy, species interactions, and biogeography. Contributions addressing reviews and meta-analyses of reported climate change responses of these organisms are encouraged.

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
