

Special Issue

Value Co-Creation in Sustainable Project Society

Message from the Guest Editors

Globalisation, technology boosting, climate change, income and wealth inequality, population growth, and medical crises are characteristics of the modern world. Both for-profit and non-profit organisations face numerous challenges to reinvent new models to create value. The traditional management approach that focuses on value for shareholders only seems inadequate for today's world. Organisations cannot create sustainable strategies focusing on one group of interested parties. Customers, suppliers, employees, local community, and other groups should be involved both in value creation and sharing. Furthermore, management processes and functions should be re-examined in order to maximise their role and contribution in value creation. Having that said, the idea of this Special Issue is to examine how value for various stakeholders is being created in a projectified society while focusing on sustainability, while striving to deploy developed theories, concepts, methodologies, and best practices to reflect on value co-creation, project network and management in the project society. About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
