

## Special Issue

# Commodity Trade and Sustainability

### Message from the Guest Editors

Sustainability is now considered a key performance indicator and extends beyond more traditional ESG policies to incorporate Sustainable Development Goals (SDGs) into Commodity trading firms' (CTFs) business strategy. However, the challenges remain formidable. Increased transparency and traceability also put pressure on the business model of traders, typically trading fungible volumes hedged with financialized derivatives in which value is captured based upon arbitrage derived from information asymmetry. New opportunities also arise for CTFs, with renewables and organics emerging as product groups in their own right. This Special Issue welcomes papers that both conceptually and empirically focus on sustainability and the global trade in commodities. We welcome both (business) case studies of different commodity product groups (agri, softs, energy, and metals and minerals) and value chains addressing strategic interventions and governance concerns, as well as more technical analysis covering sustainability in commodities trade.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
